Fusing Multi-Frequency Data Sources for Improving Health

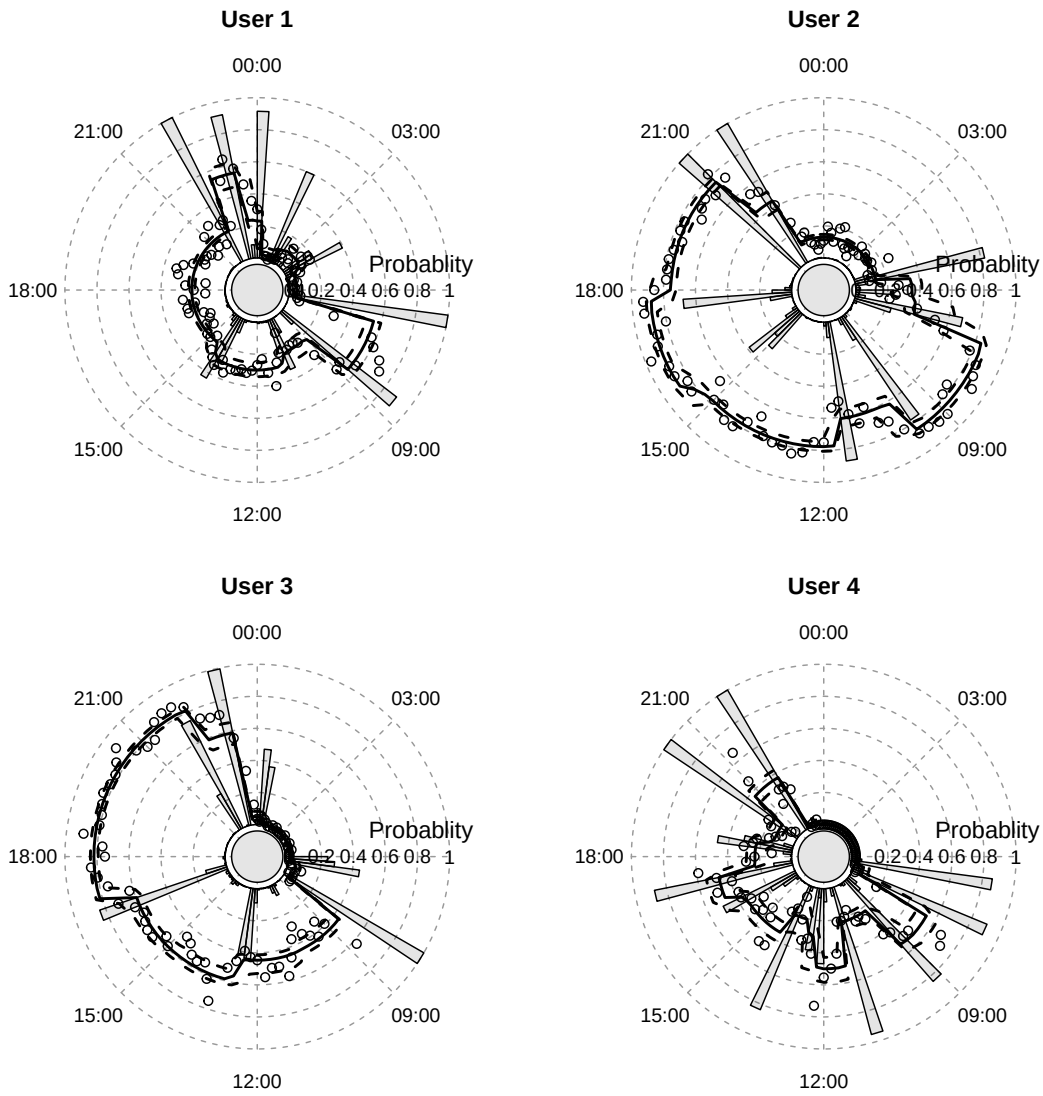

Lancaster & Intelesant
Phd Pitch

Project Motivation

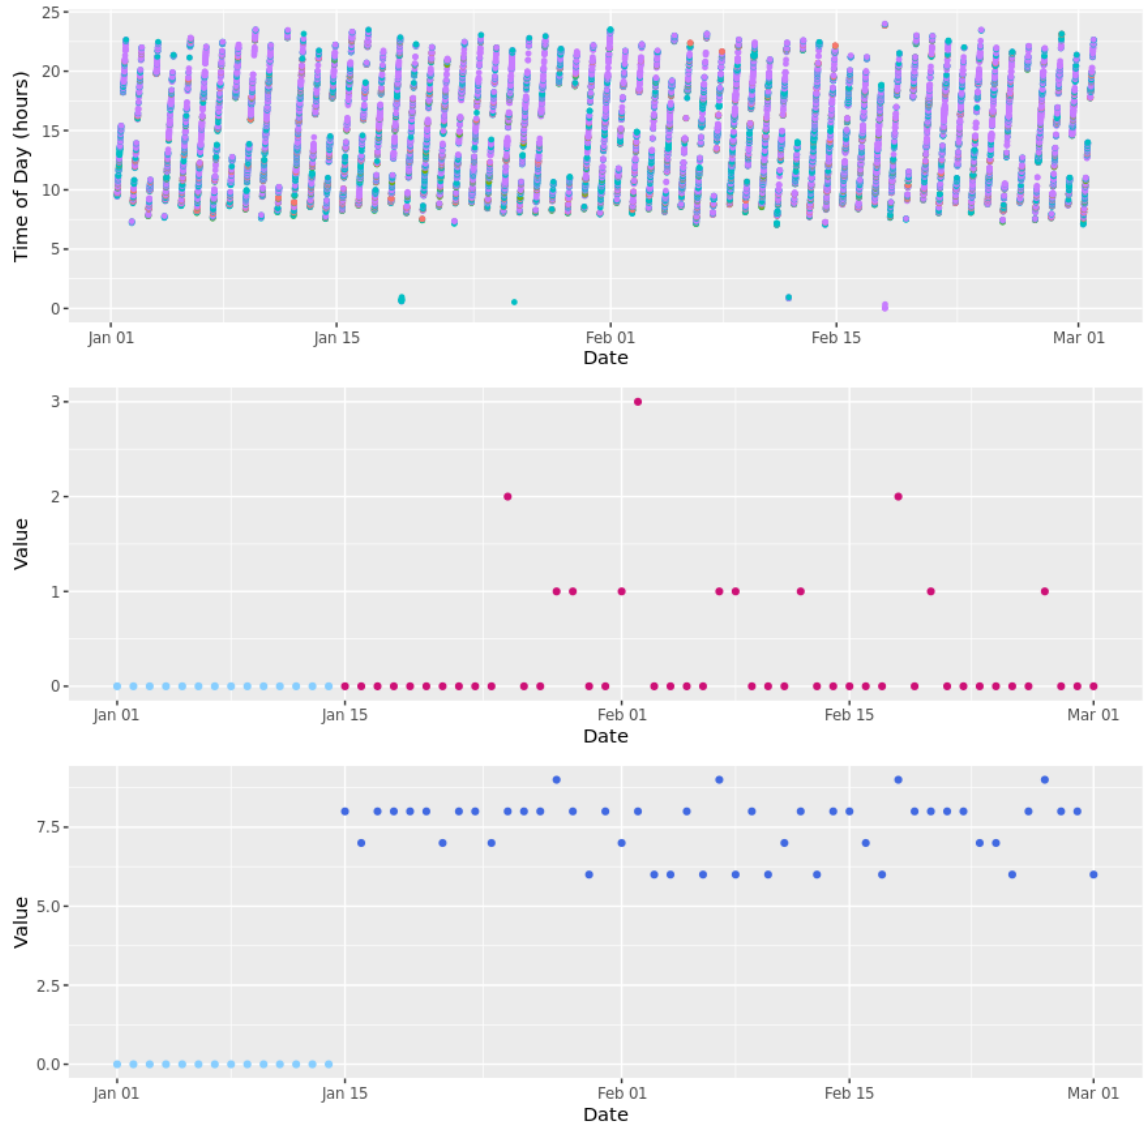

Data Science | Lancaster University

- Aging population living longer in their own homes
- Howz for family benefit - “safe, warm, well”
- Uses connected home - sensors
- Their problems look like changepoint problems
- Patterns of behaviour are important
- History of successful projects

Project Description

Data Science | Lancaster University

- Recently acquired a new data source, smart meter data
- Want to integrate this in their current practice
- Method must be multi-scale, both within day pattern changes and monthly, quarterly, yearly pattern changes.
- Scope beyond this is at the interest of the student could go into novel pattern detection, new changepoint models, online aspects, forecasting, . . .
- Key: Implement the model in software to be implemented within Howz

Intelesant collaboration

Data Science | Lancaster University

- Intelesant are a local (Manchester) SME, product = Howz.
- The student is expected to spend 1 month per year with Intelesant
- Intelesant's data science team works remotely (one from Lancaster)
- Likely to be more day trips to Manchester
- Intelesant expect you to implement methods on their data and will encourage you to use it in production during your PhD.
- As Intelesant is small you will have a huge impact and be core to the team
