QUEST: Statistical Approaches

Rebecca Killick
April 2021

My Research Philosophy

Data Science | Lancaster University

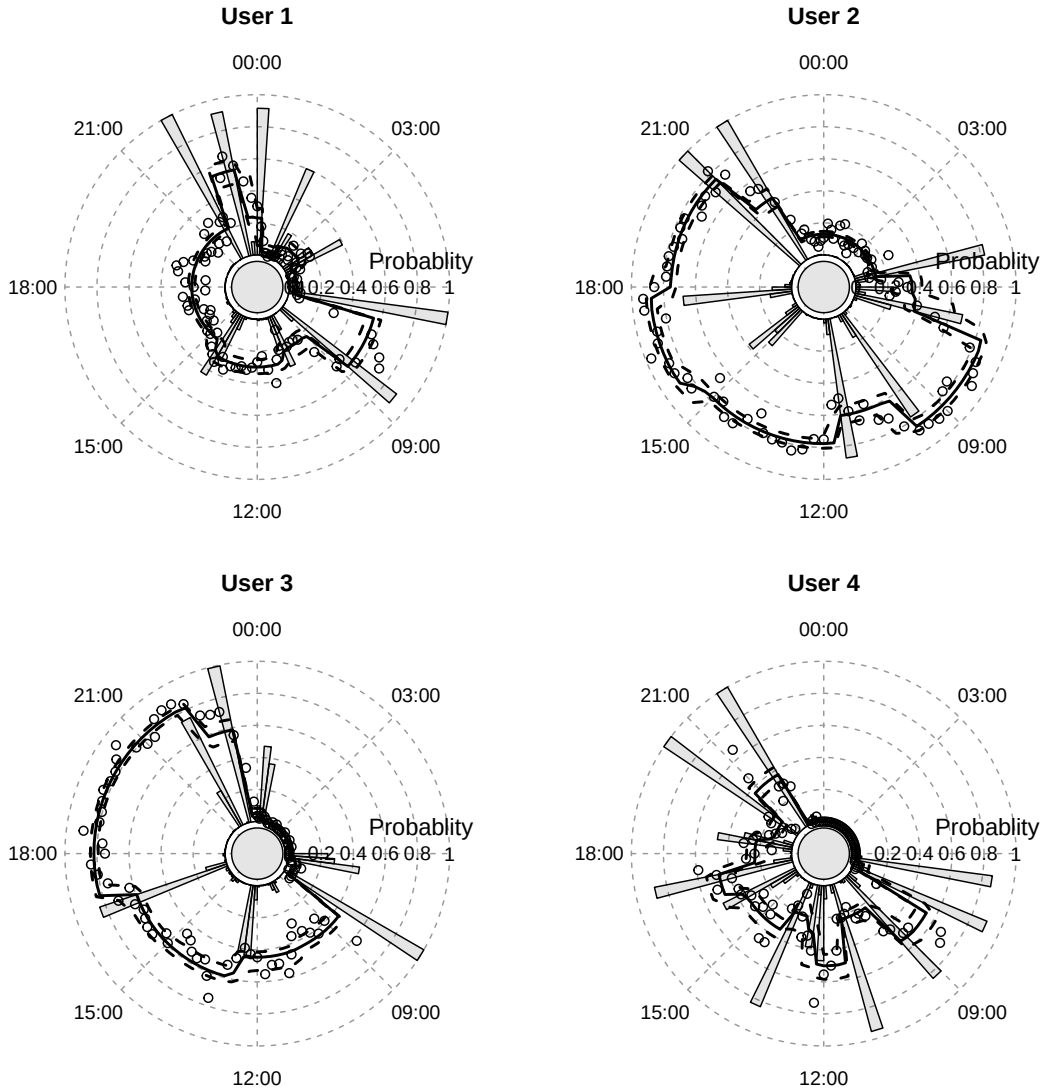

- Identify problems in the real-world
- Seek to address these problems using my expertise
- Typically need to create new methodology to solve the problem (stats papers)
- Feed back the solution into the problem domain (problem domain papers)
- Release the general methodology as open source software for others
- All Projects/PhD students have industry partners
- Impact is embedded

Problems I'm Interested In

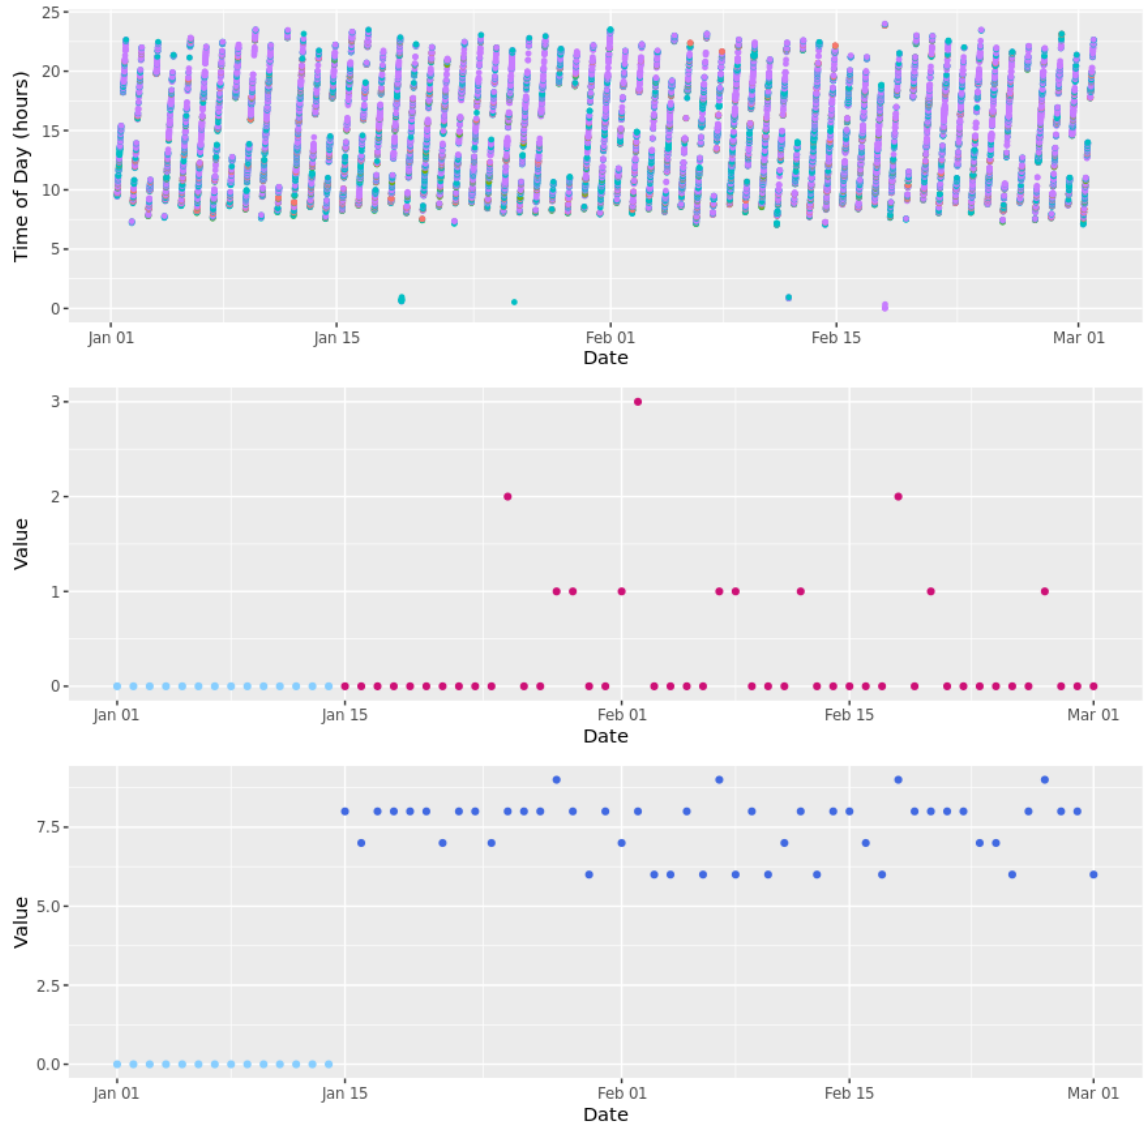

Data Science | Lancaster University

- Data observed over time/ordering
- Inference for changing properties over this observed time/ordering
- Embedding this inference within an analysis pipeline
- Combining data with different structures and/or sampling
